

Stegosaurus is well known for the giant plates on its back, its deadly looking spiked tail -- and for having a brain no bigger than a walnut. It was once thought that this big plant-eater had a second brain above its hips, but this was not true. Some scientists believe *Stegosaurus*'s bony plates may have acted as radiators to help control the animal's body temperature.

Lived at the same time as: *Allosaurus*, *Apatosaurus*, *Brachiosaurus*, *Camptosaurus*, *Diplodocus*, *Ornitholestes*

Commissioner Jane Henney,

The HFA^{is} petition which calls for putting an end to the practice of feeding dead pigs, horses and other animals to live farm animals. U.S. Pigs are known to have possible the disease known as TSE and laboratory tests have confirmed this scenario. It should also be banned from cosmetics, fertilizer and other products. We are, it seems to me, in a circle of poison. This needs to be stopped. We as citizens are trying to make our own corners of the world stable and running smoothly -- you on the other hand have just the knowledge and leverage at your fingertips to do all of us yourself included a great service -- safety in our products. Please heed this HFA petition it will make all of our lives safer and free of contamination. Docket 99P-0033/CP-1 will further explain the dangerous situation.

Sincerely
Dorothy Nowotny
